

## **Bootcamp Automation Project**

**Deadline: 19-March-2025 19:00 GMT+3**

### **Requirements**

- A test case should be written using any programming language and framework (Java or Python + Selenium would be preferable)
- No BDD(Cucumber, Quantum, Codeception, etc.) frameworks are allowed
- Test code should fully meet POM requirements

### **Steps :**

1. Go to <https://www.amazon.com.tr/>
2. Verify that you are on the home page
3. Type 'samsung' in the search field at the top of the screen and perform search.
4. Verify that there are results for Samsung on the page that appears.
5. Click on the 2nd page from the search results and verify that the 2nd page is currently displayed on the page that opens.
6. Go to the 3rd Product page from the top
7. Verify that you are on the product page
8. Add the product to the cart
9. Verify that the product has been added to the cart
10. Go to the cart page
11. Verify that you are on the cart page and that the correct product has been added to the cart
12. Delete the product from the cart and verify that it has been deleted
13. Return to the home page and verify that it is on the home page
